

Be sure
you've got
the real FC2!

When you decide to use a female condom, make sure it is an FC2 female condom. FC2 female condom meets high quality standards set by international health agencies like WHO (World Health Organization) and FDA (US Food and Drug Administration). You can see whether the female condom pack contains a real FC2 by checking that at least one of the following is visible on the packaging:

- 
- FC2
- The Female Health Company (FHC)

The FC2 female condom
for enjoyable safer sex

The FC2 female condom prevents

- unintended pregnancy
- sexually transmitted infections (STIs), including HIV

Are you planning a pregnancy? Or do you want to wait to have your next child? The FC2 female condom is a safe and enjoyable family planning method. It also protects against sexually transmitted infections (STIs), including HIV.

What is the FC2 female condom?

The FC2 female condom is a soft, smooth condom. It is easy to insert in the vagina. FC2 has an inner and an outer ring that hold it in place during sex. FC2 has a perfect fit. It lines the walls of the vagina, allowing the penis to move freely inside the condom during sex, the silicone-based lubricant giving a natural sensation.

Enjoyable

Both men and women enjoy sex with the FC2 female condom. FC2 has many advantages:

- The material is smooth and soft.
- It feels natural because it quickly warms up to body temperature.
- The female condom isn't tight around the penis and gives the man a natural sensation.
- FC2 can be inserted either a few hours or just before sex.
- FC2 can be used by people who are allergic to latex.
- It is made of a synthetic material called nitrile.
- You don't need to see a doctor before you start using female condoms. FC2 doesn't affect your body and it doesn't contain hormones.

Safe

Just like a male condom, the FC2 female condom completely blocks sperm and the bacteria or viruses that cause STIs. The outer ring provides added protection against STIs by covering the woman's external sex organs and the base of the penis. FC2 is for single use only.

Emma:

After years of hormonal contraception, I was sick of the side effects. With the FC2 I can space my pregnancies with confidence. It is the closest thing I've found to nothing at all!

Santiago:

I love the FC2 because it is less noticeable than most other condoms. It warms to your body temperature and doesn't constrict, making sex feel more natural. It might not be there for that reason, but the ring on the inside provides extra stimulation for the both of us!

Olivia:

My boyfriend and I both think the sensation is much better compared to the male condom. Plus, it's easy to insert during sex. He enjoys watching me put it in, which feels sexy!

James:

The best part of the FC2 is that you can maintain intimacy before and after sex. We no longer need to interrupt foreplay to put on a condom, and she doesn't have to get up right after sex and take it out.

Sofia:

It feels safer to not always depend on the man to put something on. I like to be in charge. And a bonus is that it covers more genital area, which could offer extra protection against STIs that are transmitted via skin-to-skin contact.
